Practical 5: Registration Form with Frontend Validation and User-Friendly Error Handling

Create a student registration form with HTML5 input types and JavaScript validation for name, email, mobile number, password, confirm password, course, year, gender, and terms acceptance. Use Regular Expression for Validations.

1.Are correct input types and attributes used?

Ans:

Yes, HTML5 input types like email, tel, password, radio, and checkbox are used with attributes such as required, minlength, and pattern.

2.Are validation errors displayed near the relevant fields?

Ans:

Yes, JavaScript displays validation error messages near the respective fields, making it easy for users to identify and correct mistakes.

3. Is password strength checked?

Ans:

Yes, JavaScript checks password strength using conditions such as length, uppercase/lowercase letters, numbers, and special characters.

4. Is the form accessible using keyboard and screen-reader-friendly Labels?

Ans:

Yes, every input has a proper <label>, and keyboard-friendly controls are used. Error messages are displayed clearly so they can be understood by screen-reader users.

The screenshot displays the 'StudentHub Portal' with a dark blue header. Below the header is a navigation menu with links: Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, and FAQ. The main content area features a 'Registration Form' with the following fields: 'Full Name' (filled with 'Rushant'), 'Email' (filled with 'rushant@gmail.com'), 'Confirm Password' (masked with dots), 'Course' (dropdown menu showing 'Computer Engineering'), 'Year' (dropdown menu showing '2nd Year'), and 'Gender' (radio buttons for Male, Female, and Other, with 'Male' selected). There is a checkbox for 'I accept the terms and conditions' which is checked, and a 'Register' button at the bottom. A dark grey modal box with rounded corners is overlaid on the form, displaying the message 'Registration successful!' in white text, with a blue 'OK' button below it. The footer of the page reads '© 2026 StudentHub Portal'.

Learning Outcome:

Learned how to use HTML5 input types, Regular Expressions, JavaScript validation, password strength checking, and accessible form design.
